Pala Tejaswi	U2221881D
Ng Zi Xuan	U2220246D
Ong Xin Ning, Trini	U2222202K

#### **Purpose**

Our mission is to simplify the urban commuting experience by helping drivers quickly find available parking spaces near their desired destination. We aim to alleviate the frustration and time wasted in searching for parking lots. This will make urban mobility more efficient, convenient, and pleasant for all drivers in Singapore.

#### **Intended Audience**

Given that our web application uses HDB API, we are only able to access HDB parking lots. Additionally, since there are vehicle size and weight restrictions, only certain vehicles are allowed into HDB car parks. Therefore, this web application is targeted at vehicle drivers, specifically those who drive Class 2 and Class 3 vehicles, e.g. motorcycles, cars, taxis, and vans.

#### **Functional Requirements**

#### 1 GPS

1.1 GPS system must get the current physical position of the user device.

### 2 Car park information

2.1 The information shall display the following:

Address of car park.

Distance from current position obtained from the GPS and the car park.

The number of available lots.

- 2.1 At most 5 car park information within 2km radius from the user's current position shall be displayed to the user, selected based on the nearest distance from the current position, if the destination location is not indicated by the user.
- 2.2 At most 5 car park information within 2km radius from the destination location shall be displayed to the user, selected based on the distance from the destination, if the destination is indicated by the user.
- 2.3 Distance must be calculated using Google Maps API.
- 2.4 If no car parks are found within a 2km radius, the system must throw in an error message "No Car Park matches Filter, Please adjust the Filter."

#### 3 Filter

- 3.1 There are 2 filters for the users to set when searching for car parks:
  - 3.1.1 Default filter where all categories are applied
  - 3.1.2 Custom filter where user may select desired categories
- 3.2 The filter shall accept user inputs from the following:
  - 3.2.1 Tick boxes of types of car parks with multiple selections allowed:

Multi-Storey Car Parks Basement Car Parks Surface Car Parks 3.2.2 Tick boxes of types of parking systems with multiple selections allowed:

Coupon Parking

Electronic Parking System

3.2.3 Tick box of Night Parking Availability: Night Parking

2.1 If the user did not use the filter function, the following must be the default filter:

All the tick boxes of types of car parks must be checked.

All the tick boxes of types of parking systems must be checked.

The tick box of "Night Parking" must NOT be checked.

#### 4 Favourite

- 4.1 Users shall be able to add their favourite car parks upon searching for the car parks.
- 4.2 Users shall only be able to remove their favourite car parks from their list of favourite car parks.
- 4.3 Users must be able to navigate to their favourite car parks.

## 5 Map View

- 5.1 Users must be able to navigate to their chosen car park.
  - 5.1.1 Map must show the shortest route to the car park using the Google Map API.
  - 5.1.2 Map view must be displayed on an entirely new page.
  - 5.1.3 Map view must be in full screen.
  - 5.1.4 Map view has a button to go "back" to exit map view.

#### 6 User Accounts

- 6.1 Users must create unique individual accounts.
  - 6.1.1 No more than 1 account shall share the same username.
    - 6.1.1.1 A username is initialised by the user when creating an account.

- 6.1.1.2 The username cannot be changed once the account is initialised.
- 6.1.2 No more than 1 account shall share the same email
  - 6.1.2.1 The email is initialised by the user when creating an account.
  - 6.1.2.2 The email cannot be changed once the account is initialised.
- 6.2 A password must be set when an account is created.
  - 6.2.1 The user shall be able to change his/her password.
    - 6.2.1.1 The user shall be able to change his/her password before login.
      - 6.2.1.1.1 The user must enter a valid email before changing the password.
      - 6.2.1.1.2 The user must receive a recovery token in the email to access the link to reset password.
  - 6.2.2 The user must enter a new password to change the password.
    - 6.2.2.1 The password must contain lowercase, uppercase letters, digits and special characters (!@#\$%^&\*()\_+{}\[\]:;<>,.?~\\-).
  - 6.2.3 The user must re-enter the new password.
  - 6.2.4 Once both entries of the new password match exactly, the new password must be changed successfully.

#### 7 Report system

- 7.1 Users must be able to report any faults of the car park.
  - 7.1.1 Users must include their car park address in the report.
  - 7.1.2 Users must provide a text description in the form of a string.
- 7.2 Admin must be able to view the reports submitted by users on the admin main page.
  - 7.2.1 Admin shall be able to view each case in detail with a click.
  - 7.2.2 Admin shall resolve each case manually by contacting the town council offline.
  - 7.2.3 Admin shall click on the "resolved" button once they contact the town council offline.
  - 7.2.4 Admin shall be able to click on a back button if they have not resolved the case.

#### 8 Admin accounts

8.1 An admin account must be created by adding the username and password straight into the account database.

#### **Non-Functional Requirements**

#### 1 Performance

- 1.1 The web application shall take within 3 seconds to load.
- 1.2 The login page shall take within 3 seconds to load.
- 1.3 The page after filtering shall take within 5 seconds to load.
- 1.4 The information on available car park slots shall take within 5 seconds to load.

#### 2 Security

- 2.1 The password must have a minimum of 8 characters, with at least 1 uppercase letter, 1 lowercase letter, 1 digit and 1 special character.
- 2.2 When the user tries to log in or change passwords, the system must verify the username and password to prevent unauthorized access.
- 2.3 The information on users' accounts must be protected strictly.

### 3 Usability

- 3.1 The web application must be easy to use and navigate.
- 3.2 The favourite function shall build a shortcut for the users to find the car park.

#### 4 Maintainability

- 4.1 Our team shall be responsible for the maintenance and upgrade of the website.
- 4.2 The structure should be well-documented and organized, making it easy for developers to understand and maintain.
- 4.3 The program should adhere to a consistent coding style and naming conventions across the entire codebase.

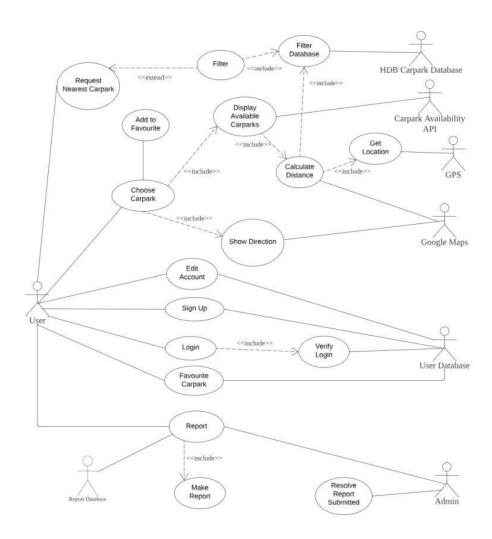

# **Data Dictionary**

Term	Definition
User	A person who has a registered account and is using the parking app.
Carpark	Physical location where cars can be parked.
Availability	The status of a parking space, either available or occupied.
Opening hours	The hours during which a car park is open
Night Parking	The status in which the car park offers parking from 7pm - 7am
Electronic Parking System	A cashless system that uses EPS antenna to read the number of ERP In-Vehicle Unit (IU) at the entry and exit of the car park
Coupon Parking	Parking System in which drivers without coupons will have to pay through Parking.sg mobile app or display valid parking coupons if they do not have valid season parking.
Multi-Storey Car Park	Car park that has parking spaces allocated to multiple storeys
Basement Car Park	Car park that has parking spaces allocated underground

Surface Car Park	Car park that has parking spaces allocated on road level.
Destination	Location that the user will be going from his/her current position
Profile	A user's personal information, such as their name, email address, and phone number.
Username	A unique name that is associated with the user used for login.
Password	A string of characters (letters, numbers, special symbols) that allow the user to access their account
GPS	A utility system that provides users with positioning services.
Distance	The distance from the user to available carparks.
Report	A short description which allows users to talk about their experience with the car park application.
Case	Report submitted by the user which is view by the admin
Favourite	An indicator that helps the system to filter the lists of places that the user commonly goes to.

Filter	Different types and conditions of car parks can be chosen for the users for searching

# **Use Case Description**

# Priority = High, Medium, Low

Use Case ID:	T301		
Use Case Name:	Sign Up		
Created By:	Zi Xuan	Last Updated By:	Zi Xuan
Date Created:	02/09/2023	Date Last Updated:	23/10/2023

Actor:	User, Admin, User Database
Description:	Users who do not have a pre-existing account will be able to initialise an account with his/her personal details, in order to access the features of the web application.
Preconditions:	-
Postconditions:	System will display a message "account has been created" upon successful account creation.

	System will redirect user to login page.
Priority:	High
Frequency of Use:	High
Flow of Events:	<ol> <li>User will click on button "Create a new account"</li> <li>User will key in email, username and password</li> <li>System will validate information by searching for username and email in user database</li> <li>System will validate passwords and check if both match identically</li> <li>System will add new entry for user information in user database</li> <li>System redirects user to login page</li> </ol>
Alternative Flows:	AF-S3: Missing fields  1. System will display the message "Please fill in all the fields" 2. System will return to main flow Step 2  AF-S3: Email already exists  1. System will display the message "email has been used!" 2. System will return to main flow Step 2  AF-S3: Username is invalid  1. System will display message "invalid username" 2. System will return to main flow Step 2  AF-S4: Password does not match requirements

	System will display the message "weak password"     System will return to main flow Step 2  AF-S4: Password and second password entry do not match identically
	System will display the message "passwords do not match"     System will return to main flow Step 2
